

DAILY PRACTICE: DAY 20260625 - CLIMATE CHANGE & ENERGY

(Level: Reading A2 - Writing A1)

Student Name:

Time Allowed: 50 mins

WARM-UP / KHỞI ĐỘNG

Answer the following questions in Vietnamese or English:

1. What are some renewable energy sources that you know? (Một số nguồn năng lượng tái tạo mà bạn biết là gì?)
2. How can we save electricity in our daily life? (Làm thế nào chúng ta có thể tiết kiệm điện trong cuộc sống hàng ngày?)
3. Why is climate change a big problem for the Earth? (Tại sao biến đổi khí hậu là một vấn đề lớn đối với Trái Đất?)

I. READING PASSAGE

Report: 2023 a Big Year for Renewable Energy

A recent report says that 2023 was a **record-breaking** year for **renewable energy sources**.

Ember, a research group based in London, reported that, for the first time, 30 percent of **electricity** produced worldwide was from **clean energy sources**. And billions of people are using **clean energy sources** daily as the number of solar and wind farms continues to grow.

Last year, hydroelectric dams produced most of the **clean energy sources** - as in most years. Yet dry weather **conditions**, or **droughts**, in India, China, and North America meant hydropower hit a five-year low. Research shows climate change is causing **droughts** to develop more quickly and be more **severe**.

People used more **electricity** than ever last year, about 2 percent more, an **increase** of about as much as Canada uses in a year. Some of this new **demand** was for heat pumps, which are an **efficient** way to both heat and cool buildings, and for electric vehicles. The **demand** was also for electrolyzers, special machines used to get hydrogen out of water, for energy. These are all technologies that provide **solutions** to climate change.

Other **increased demand** was for **electricity** to feed new data centers and for air **conditioning** as places around the world become hotter.

Solar made up the biggest part of new **clean energy** last year. More than twice as much solar power was added as coal power. It was the 19th year **in a row** that solar was the fastest-growing **source** of **electricity generation**. A large **increase** in solar installations happened at the end of the year and the report **predicts** 2024 will see an even larger jump.

China added more **renewable** energy than any other country last year – 51 percent of the new solar power and 60 percent of the new wind power worldwide. China, the European Union, the United States and Brazil together were **responsible** for 81 percent of new solar **generation** in 2023.

Despite the growth in **clean energy**, fossil fuels like coal still made up most of the **electricity** generated worldwide last year. The report said some countries burned coal to **make up for** the loss of hydroelectric power they experienced when **drought** caused their water supply to dry up.

China was **responsible** for 55 percent of coal **generation** worldwide. And 60 percent of China's **electricity generation** came from coal. China, India, Vietnam and Mexico were **responsible** for nearly all of

the **increase**. The International Energy Agency says fossil fuels **release** more carbon dioxide to produce **electricity**. And scientists say **fossil fuel** burning needs to **decrease** quickly to protect Earth's climate.

Experts expect the world to use even more **electricity** in 2024. However, as **renewable** energy **generation** is **predicted** to grow, it could mean a 2 percent drop in energy generated from fossil fuels.

II. IELTS READING QUESTIONS (13 QUESTIONS)

Questions 1–5: Do the following statements agree with the information given in the Reading Passage? Write:

1. In 2023, clean energy produced 30 percent of the world's electricity.
2. Droughts caused by climate change led to a five-year low in wind power generation.
3. The demand for electricity increased by about 2 percent last year.
4. The UK government spent billions of pounds to install solar panels in 2023.
5. Coal was used by some countries to replace the electricity lost from hydroelectric power. (*)

Questions 6–9: Complete the sentences below. Choose NO MORE THAN TWO WORDS from the passage for each answer.

6. Hydropower reached a low in 2023 because of dry weather conditions.
7. Solar power was the source of electricity generation for the 19th consecutive year.
8. Last year, added more renewable energy than any other country in the world.
9. Burning fossil fuels releases more to produce electricity. (*)

Questions 10–13: Choose the correct letter, A, B, C, or D.

10. Why did hydropower experience a decline in India, China, and North America in 2023?
 - A. Because of severe droughts and dry weather.
 - B. Because countries stopped using dams.
 - C. Because people used less electricity.
 - D. Because solar power replaced it.
11. Which technologies mentioned in the text provide solutions to climate change?
 - A. Heat pumps and electric vehicles.
 - B. Coal-powered generators.
 - C. Traditional air conditioning systems.
 - D. Data centers.
12. Which country was responsible for 55 percent of coal generation worldwide?
 - A. India.
 - B. Mexico.
 - C. China.
 - D. Brazil.

13. What does the report predict for the year 2024?

III. QUESTIONS FOR GRAMMAR (15 QUESTIONS)

Questions 14–28: Complete the exercise.

14. Solar power is becoming _____ than coal power in many countries.
A. cheap B. cheaper C. cheapest D. more cheap
15. As the earth gets hotter, the weather conditions become _____.
A. severe B. severer C. most severe D. more severe
16. Electric vehicles are _____ than gasoline cars because they do not burn fossil fuels.
A. efficient B. more efficient C. most efficient D. efficienter
17. The drought in North America last year was _____ than the year before.
A. bad B. worse C. worst D. more bad
18. Modern heat pumps are _____ than traditional heaters for warming buildings.
A. good B. better C. best D. more good
19. Yesterday, the research group _____ their new report on renewable energy.
A. publish B. published C. has published D. was publishing
20. Since 2010, many countries _____ new wind farms to generate clean electricity.
A. build B. built C. have built D. are building
21. In 2023, China _____ more solar panels than any other nation.
A. adds B. added C. has added D. was adding
22. We _____ a lot of progress in renewable technologies over the past few years.
A. make B. made C. have made D. making
23. Last summer, severe heat waves _____ the demand for air conditioning in India.
A. increase B. increased C. has increased D. was increasing
24. Solar power is (A) now more cheaper (B) than traditional (C) fossil fuels (D) in most regions.
25. The scientist has explained (A) the new climate (B) solution to (C) the government yesterday (D).
26. Droughts have become (A) more severer (B) because of global (C) warming recent years (D).
27. Last week, India has burned (A) more coal to (B) make up for the loss (C) of hydroelectric (D) power.
28. We have used (A) more (B) electricity this year than (C) we do (D) last year. (*)

IV. QUESTIONS FOR WRITING (3 TASKS)

Task 1: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

wind power / clean / is / energy / a / source

Answer:

Task 2: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

reduce / burning / we / fossil fuels / must

Answer:

Task 3: (*) Sentence Completion (Hoàn thành câu)

Complete the sentence using the words "solar" and "electricity": We can use

Answer:
