

DAILY PRACTICE: DAY 20260625 - CLIMATE CHANGE & ENERGY*(Level: Reading B1 - Writing A1)*

Student Name:

Time Allowed: 50 mins

WARM-UP / KHỞI ĐỘNG**Answer the following questions in Vietnamese or English:**

1. Have you noticed the weather getting hotter in recent years? (Bạn có nhận thấy thời tiết ngày càng nóng lên trong những năm gần đây không?)
2. What is the difference between fossil fuels and clean energy? (Sự khác biệt giữa nhiên liệu hóa thạch và năng lượng sạch là gì?)
3. How does human activity affect global temperatures? (Hoạt động của con người ảnh hưởng như thế nào đến nhiệt độ toàn cầu?)

I. READING PASSAGE**Climate Agency: 2023 Broke Global Heat Record**

Earth shattered global heat records in 2023, flirting with the 1.5-degree Celsius warming limit set by international agreements. The European climate agency, Copernicus, reported that the average global temperature last year was the warmest in recorded history.

Copernicus reported that the average temperature for 2023 was 14.98 degrees Celsius. That number is about one-sixth of a degree Celsius higher than the previous record set in 2016.

Samantha Burgess, the deputy director of Copernicus, said the record-breaking warmth lasted for seven consecutive months. "It wasn't just a season or a month that was exceptional. It was exceptional for over half the year," she said.

Scientists have noted that 2023 was likely the warmest period for the Earth in over 100,000 years. For more than half of the year, the world was 1.5 degrees Celsius warmer than pre-industrial levels, which is the average temperature from the mid-1800s.

Malte Meinshausen, a climate scientist at the University of Melbourne, explained that about 1.3 degrees Celsius of the warming is driven by greenhouse gases. Another 0.1 degrees Celsius comes from El Niño, a natural weather pattern that warms parts of the Pacific Ocean. The rest is from other smaller factors.

The 1.5-degree Celsius limit was established in the 2015 Paris climate conference. Climate experts say exceeding this limit on a long-term basis could lead to extreme climate disasters. Although the global average for 2023 was just below 1.5 degrees Celsius, Burgess urged countries to take action. "We have to keep the goal alive because lives are at risk," she said.

II. IELTS READING QUESTIONS (13 QUESTIONS)

Questions 1–5: Do the following statements agree with the information given in the Reading Passage? Write:

1. The global average temperature in 2023 was the highest ever recorded.
2. The previous warmest year on record was 2016.
3. Only the summer months in 2023 broke records for warmth.
4. The Copernicus climate agency was established in 1940.
5. Malte Meinshausen thinks natural weather patterns were the main cause of the 2023 warming. (*)

Questions 6–9: Complete the sentences below. Choose NO MORE THAN TWO WORDS from the passage for each answer.

6. In 2023, the global temperature was close to the warming set by international agreements.
7. Earth's average temperature in 2023 was 14.98 degrees Celsius, which is slightly higher than the set in 2016.
8. Scientists believe 2023 was likely the warmest period on Earth in more than .
9. An ocean-warming pattern called contributed 0.1 degrees Celsius to the temperature rise. (*)

Questions 10–13: Choose the correct letter, A, B, C, or D.

10. What did Samantha Burgess say about the global warmth in 2023?
 - A. It only affected Europe and North America.
 - B. It was exceptional for more than six months.
 - C. It was caused entirely by greenhouse gases.
 - D. It was less severe than the warmth in 2016.
11. According to Malte Meinshausen, what was the primary driver of the 2023 temperature increase?
 - A. Greenhouse gases.
 - B. El Niño.
 - C. Changes in solar activity.
 - D. Ocean currents.
12. Where was the 1.5-degree Celsius warming threshold established?
 - A. At a climate meeting in London.
 - B. At the University of Melbourne.
 - C. At the 2015 Paris climate conference.
 - D. At the Copernicus headquarters.
13. Why did Samantha Burgess urge countries to take action to limit warming?

III. QUESTIONS FOR GRAMMAR (15 QUESTIONS)

Questions 14–28: Complete the exercise.

14. In 2023, the global average temperature _____ the previous record set in 2016.
 - A. breaks
 - B. broke
 - C. has broken
 - D. is breaking
15. Scientists _____ a significant rise in greenhouse gas emissions since the industrial revolution.
 - A. observe
 - B. observed
 - C. have observed
 - D. are observing

16. If greenhouse gas emissions continue to rise, global temperatures _____ even faster.
A. increase B. increased C. will increase D. would increase
17. The 1.5-degree limit _____ during the 2015 Paris climate conference.
A. established B. was established C. has established D. has been established
18. Renewable energy technologies _____ more efficient over the last decade.
A. become B. became C. have become D. are becoming
19. Last year, several countries _____ by extreme weather events like wildfires and floods.
A. hit B. were hit C. have hit D. have been hit
20. Clean energy sources, such as wind and solar, _____ to generate electricity.
A. use B. are used C. used D. have used
21. If we _____ our use of fossil fuels, we will protect the Earth's climate.
A. reduce B. reduced C. will reduce D. would reduce
22. The research team _____ their climate report two weeks ago.
A. publishes B. published C. has published D. was publishing
23. Solar power is _____ than ever before due to technological improvements.
A. cheap B. cheaper C. cheapest D. more cheap
24. Many international agreements _____ signed to reduce carbon emissions.
A. are B. were C. have been D. has been
25. If the temperature _____ by 2 degrees, extreme weather will become much worse.
A. rise B. rises C. will rise D. would rise
26. Finding a solution to global warming is _____ than ignoring it.
A. important B. more important C. most important D. importantly
27. Carbon dioxide _____ into the atmosphere when fossil fuels are burned.
A. releases B. is released C. released D. has released
28. I _____ this book about renewable energy yet.
A. don't read B. didn't read C. haven't read D. am not reading (*)

IV. QUESTIONS FOR WRITING (10 TASKS)

Task 1: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

earth / global / in / records / heat / broke / 2023 . →
.....

Answer:

Task 2: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

greenhouse / rising / gases / temperatures / cause . →

.....

Answer:

Task 3: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

we / use / solar power / to / generate / electricity / can . →

.....

Answer:

Task 4: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

fossil fuels / release / carbon dioxide / burning / produces . →

.....

Answer:

Task 5: Word Ordering (Sắp xếp từ thành câu hoàn chỉnh)

climate / we / protect / must / the / earth / of . →

.....

Answer:

Task 6: Sentence Completion (Hoàn thành câu)

We can use wind energy to (generate electricity)

Answer:

Task 7: Sentence Completion (Hoàn thành câu)

If we burn fossil fuels, we will (release greenhouse gases)

Answer:

Task 8: Sentence Completion (Hoàn thành câu)

Solar panels are (renewable energy sources)

Answer:

Task 9: Translation (Dịch câu)

Biến đổi khí hậu đang làm cho hạn hán trở nên nghiêm trọng hơn. →
.....

Answer:

Task 10: (*) Translation (Dịch câu)

Chúng ta phải tìm kiếm giải pháp cho sự nóng lên toàn cầu. →
.....

Answer:
